

1. What type of data points will be needed for the project? Is it just basic demographic and employment data and trends or will other information be sought?

A: This will mostly be basic demographic and employment data with trends for both. Some additional data may be needed but should not be much

2. What are you looking for in regards to the cluster analysis? What are your needs?

A: We are looking for mostly a basic cluster analysis. We want to understand the major clusters in this region, how they interact and which ones may be enhanced. Also looking at sizes to understand which clusters will need the most workers as we make this transition.

3. Do you want a data report for each county or just for the region that would have the most significant impact on the budget?

A: It is not necessary to go into each county unless the data shows a particular set in one or two particular counties that should be explored.

4. Do you have an idea of timeline regarding when you want the data and cluster analysis to occur?

A: I am not sure what time this question is looking for.
